Investment Series Income Securities Portfolio

As at 30 June 2024

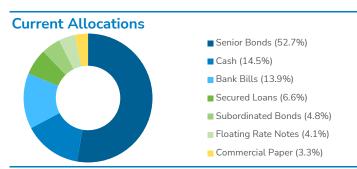

Investment Objective and Strategy

The Income Securities Portfolio invests entirely in income assets. It is suited to investors looking for a better return than traditional on-call or term investments with major trading banks, with an expected stable capital value, who are willing to accept a low to medium level of credit risk.

Risk Indicator

The Risk Indicator is rated from 1 (low) to 7 (high). The rating reflects how much the value of the Fund's assets go up and down (volatility). A higher risk generally means higher potential returns over time, but more ups and downs along the way. See the Product Disclosure Statement for more information about the risks associated with investing, and how the risk indicator is calculated.

Why invest in the Income Securities Portfolio?

Diversification- Credit risks are managed by diversifying across a range of securities holding at least a BB Standard & Poor's (S&P) (or Booster rated G5 equivalent) credit rating or in secured loans.

Tax Effective- As a PIE, 33% or 30% taxpayers are capped at a 28% prescribed investor rate (PIR) by using the Portfolio. The Portfolio is tax efficient for exempt investors and those requiring gross investments such as charities.

Low Minimums- \$1,000 minimum holding and \$100 regular saving or withdrawal amount from Call Class.

Use of Money- PIE Tax is not payable until each year end or on full withdrawal. This is a benefit compared with non-PIE investments, which typically deduct and pay withholding tax each month.

Key Facts

Fund Size		\$151.4 million
Inception Date		7/08/2008
Manager	Booster Investn	nent Management Limited
Supervisor		Public Trust

Booster Investment Management Limited is the issuer and manager of the Booster Investment Scheme. Product Disclosure Statements are available at www.booster.co.nz
This document is for informational purposes only. The information is derived from sources believed to be accurate as at the date of issue and may change. The content is of a general nature and does not take
into account your financial situation or goals and is not financial advice. Booster Investment Management Limited and its related companies do not accept any liability for any loss or damage arising directly
or indirectly out of the use of, or reliance on, the information provided in this document. The fund's performance, returns, or repayment of capital, are not guaranteed.

 $^{^{3}}$ Asset class weighting is the current target, assets listed within this asset class are actual underlying holdings.

⁴ External Ratings are Standard & Poor's (S&P), Fitch's, or Moody's ratings. Ratings of 'A-1+' for NZ Cash, and 'A-2' for commercial paper investments held by the portfolio, reflect S&P's short-term rating scale that applies to these investments. A company with a short-term rating of 'A-2' would generally be consistent with having a long-term rating of 'BBB' or better.

⁵ The Secured Loan to Booster KiwiSaver Scheme Geared Growth Fund (a related party) and the AAM Diversified Loan Fund, are not independently rated, but Booster Investment Management Limited considers the credit rating of these securities to be equivalent of a Standard & Poor's (S&P) rating of "A" and "BB" respectively. BondWatch, Booster's credit review process, is used to review the remaining securities not independently rated. The BondWatch rating is the result of our internal analysis of a company's financials, governance structure, and business outlook measured against sector-specific metrics. We consider both quantitative and qualitative aspects of the business to ensure our BondWatch rating reflects both the current standing and stability of that credit profile going forward. The BondWatch rating scale from G1 (highest) to G8 (lowest). A rating of G5 is the minimum level for a security to be included in the portfolio - which we consider equivalent to a S&P rating of BB. More information can be found at https://booster.co.nz/bondwatchsummary.aspx.

⁶ The fund enters into a number of standard interest rate swap agreements with third parties (e.g. banks and like institutions) to provide greater certainty as to the effect of changes in interest rates on the fund's investments. The relatively minor negative net value of these swaps to the fund represents the implied cost of exiting these interest rate swap agreements at market rates following the fall in interest rates in recent years. This does not affect the payment of the Posted Rates to investors.
